

TLI Group—Landscaping, Concrete and Irrigation

Did you know that your concrete doesn't have to be plain grey anymore?

With innovations in concrete appearing every year, there are now several options available for you to enjoy a custom look to your concrete projects. Here are some of the options available to you from the TLI Group:

Pattern Stamp

Stamped concrete can be designed and colored to resemble almost any surface including granite, slate, marble and even wood. Driveways, patios and sidewalks are excellent applications for stamped concrete, creating striking appearances with a more durable surface than regular concrete. In addition, stamped concrete is less expensive to maintain than natural stone, requiring to be re-sealed only every 3-4 years. Stamped concrete is also a beautiful choice for interior floors and entries.

Exposed Aggregate

An exposed aggregate surface is obtained by placing concrete and then removing the outer 'skin' of cement paste to reveal the decorative coarse aggregate. Because of its durability and skid resistance, an exposed aggregate finish is ideal for all applications of concrete flatwork. As well, colour can be incorporated into the concrete mix or the exposed aggregate concrete can be highlighted with stamped concrete borders or inserts to create a beautiful concrete feature area.

Acid Stain

Acid Stain is a deep, penetrating chemical stain which can be used to give old or new concrete a rich, variegated finish that will not chip, peel or fade. With a wide selection of earth-based colours and translucent hues, acid stain can transform any masonry surface, horizontal or vertical, into a beautiful work of art that radiates luxury, warmth and elegance.

Broom Finish

Broom Finish is the standard finish throughout the concrete industry. Depending on traction requirements, the finish can be a light or coarse broom and colour can also be incorporated into the concrete mix to enhance the aesthetic appeal. Broom finish provides a cost-effective, non-slip surface for all concrete flatwork applications.

Overlays

Polymer-based concrete overlays provide an economical option to re-surfacing existing concrete flatwork. Without the time and expense involved in removing existing concrete an overlay allows for a wide variety of finishes to upgrade its appearance. Whether stamped or stained, an overlay can create a striking feature area customized to personal taste.

Contact The TLI Group today and they'll help you bring concrete to life. The TLI Group can also help you with your custom curbing work. If you are looking for concrete borders or edging for your yard or garden, give us a call today.
